FOR IMMEDIATE RELEASE

Dart Entities launches a Sustainability Program to protect the Environment, Health, and Safety of their Employees, Partners and Communities where they operate.

Dart Entities recognizes the necessity for a cleaner more sustainable world. They believe they have a responsibility to personnel, communities, shareholders, partners, and the environment; to conduct their business in the most sustainable way. Corporate responsibility and sustainability are valued and regarded in all their operations.

Dart Entities acted immediately to ensure 2021 was off to a sustainable start. Their corporate office was the first to take part in establishing a new water system. The water system supports the current pandemic environment by utilizing a touchless bottle-less purifier system with six-stage Reverse Osmosis and Activated Oxygen Injection. Energy and fossil fuels are not the only resources that are utilized in the production of bottled water. The production of bottled water consumes additional water (up to 4x) for the manufacturing process. The water system alone has eliminated the annual use of 1,080 5-gallon plastic bottles.

Dart Entities' goal is to reduce their carbon footprint, energy consumption and CO2 emissions to support a cleaner world. By January 1, 2022, Dart Entities' multi-tenant sites will have an overall reduction in waste by 5% and increased recycling by 10% year over year.

This means Dart Entities will integrate the three pillars of sustainability: economic, social, and environmental development. Dart Entities will educate and train their employees. While sharing and promoting incentives to their partners. Dart Entities will conserve energy, water, dispose of waste responsibly, reduce unnecessary materials, reduce pollutants their actions may generate and encourage sustainability for future generations.
